

YXLON SmartSpares

- Best compatibility for YXLON systems
- Additional functionality
- Highest system uptime
- Innovative logistics and distribution concepts with the SmartExchange program

YXLON SmartSpares PREMIUM Grid Unit FXT

With this Y.SmartSpares the exchange of your worn filament will be a quick and comfortable Plug&Play task. The kit includes two complete grid units with precise adjusted filaments which can be exchanged in just a few steps. The precise adjustment will also extend the lifetime of your filament to a maximum and supports you in getting the best and constant image quality.

Besides, the Y.SmartSpares PREMIUM Grid Unit FXT enables you to participate in the Y.Exchange program for four years. Instead of high costs for new grid units or long lead times to get your refurbished grid units back, we directly exchange the kit. All we need is an order for the Y.Exchange Grid Unit, as well as the tracking-number and RM-number for sending back the exchange case with the worn grid units.

System prerequisites

- FXT160.45/48/50 (1500 µm)
- FXT 160.51/61, 190/225.xx (1200 µm)
